

Parthiban Murugan

Senior QA Automation Engineer (SDET)

AI-driven and agentic QA · Playwright · MCP-based test automation

Chennai, India · +91 8220251080 · Parthiban.murugan2705@gmail.com · [linkedin.com/in/parthibanmurugan](https://www.linkedin.com/in/parthibanmurugan) · github.com/ParthiCM

PROFESSIONAL SUMMARY

Senior QA Automation Engineer (SDET) with 5+ years of experience in UI, API, and end-to-end test automation for web and microservices applications. Builds and scales Playwright, Selenium, and WebdriverIO frameworks in TypeScript, JavaScript, Java, and C#, with performance testing in K6. Applies AI-assisted QA tooling (Cursor, Claude, GPT, Gemini) and MCP integrations across test case authoring, automation development, and Jira reporting to cut manual effort and shorten release cycles. Works in Agile teams with CI/CD pipelines in Jenkins, GitHub, and Azure DevOps.

CORE SKILLS

Testing: Functional, Smoke, Regression, API, End-to-End, Integration, Performance, Load, Security, Microservices, Cross-Browser, Visual Testing

Automation: Playwright, Selenium WebDriver, WebdriverIO, CodeceptJS, K6, Postman, REST Assured, SoapUI, Applitools

Languages: TypeScript, JavaScript, Java, C#

Databases: SQL, MongoDB, database validation and test data management

Frameworks: TestNG, NUnit, Mocha, Jest, Chai, Cucumber, SpecFlow, Page Object Model, BDD, TDD

AI and Agentic QA: Cursor, Claude Code, GPT, Gemini, AI-assisted test case generation, reusable skill files, MCP servers, Jira MCP, Playwright MCP, BrowserStack MCP, Jenkins MCP

CI/CD and DevOps: Jenkins, GitHub Actions, GitLab CI, Azure DevOps (TFS), Git, Docker

Tools: Jira, Zephyr, TestRail, BrowserStack, Allure, Node.js, .NET

CI reporting: cross-build test history, failure-signature triage

PROFESSIONAL EXPERIENCE

Senior QA Automation Engineer, One Click LCA Pvt. Ltd.

Chennai, India · September 2024 – Present

- Designed and scaled Playwright and TypeScript automation frameworks covering UI, API, and regression suites, raising automated coverage and cutting manual validation effort each release.
- Applied AI tools (Cursor, Claude, GPT, Gemini) to generate test cases, expose coverage gaps, and accelerate automation authoring, reducing script development time significantly.
- Created reusable AI skill files and action-specific workflows so the QA team produced consistent, standards-compliant test artefacts.
- Integrated MCP servers to author test cases directly in the test management tool, drive execution through Playwright MCP, and publish run summaries back to Jira tickets through Jira MCP.
- Ran regression, smoke, and K6 load testing in Jenkins pipelines, improving release stability and defect detection before production.
- Validated cross-browser and cross-device behaviour on BrowserStack, and managed test cases and reporting in TestRail, Zephyr, and Jira.
- Partnered with product and engineering on requirement reviews, code reviews, and QA knowledge sharing.

Senior Test Developer, TransPerfect Solutions India Pvt. Ltd.

Client: TransPerfect, TLS Division · September 2022 – September 2024

- Built and maintained Selenium C# and Playwright TypeScript automation suites for enterprise web applications, improving regression efficiency and release confidence.
- Translated product requirements into automated test coverage with product owners and developers, preventing defects before code reached QA.
- Executed regression, smoke, and K6 performance validation across releases to keep application stability measurable.
- Led code reviews and delivered framework training that lifted team adoption of automation best practices.

Automation Test Engineer, Cognizant Technology Solutions

Clients: Refinitiv and Thomson Reuters · November 2020 – September 2022

- Authored and executed functional, regression, and smoke test suites for financial data platforms, supporting reliable release cycles.
- Maintained and extended Selenium Java and WebDriverIO TypeScript frameworks, keeping coverage aligned with product change.
- Introduced Appliflow visual validation to catch UI regressions that scripted assertions missed.
- Managed defects and test cases in Jira, TestRail, and GitLab, and trained team members on framework usage.

KEY PROJECTS

- **QA Agentic Pipeline** (github.com/ParthiCM/qa-agentic-pipeline). Open-source AI QA automation system built on Claude Code and MCP servers. Three orchestrated agents take a Jira ticket to a draft pull request in around 30 minutes: reading the ticket, generating test cases in BrowserStack Test Management, writing Playwright tests, and posting the summary back to Jira. Layered agent, skill, and config design lets multiple squads share one repository with no merge conflicts. Stack: Claude Code, MCP (Jira, BrowserStack, GitHub), Playwright, TypeScript, Node.js.
- **Playwright Test History** (github.com/ParthiCM/playwright-test-history). Open-source CI reporting tool that keeps test history alive past Jenkins build rotation. Each run is written to an immutable per-build store outside the build record, then rendered as one self-contained HTML page: every test across every build, plus current failures grouped by failure signature, so a wall of red resolves into a short, ordered list of shared defects. Zero runtime dependencies and 43 unit tests. Live demo: parthicm.github.io/playwright-test-history. Stack: Node.js, JUnit XML, Jenkins, HTML Publisher.
- **C# Selenium Test Framework**. TDD-based UI automation framework built for extensibility and low maintenance across product releases. Stack: C#, .NET, Selenium, NUnit.

ACHIEVEMENTS

- Built a connected QA workflow spanning requirement analysis in Jira MCP, test case authoring through BrowserStack MCP, and automated execution through Playwright MCP.
- Proposed and implemented Appliflow visual testing, improving UI validation accuracy across releases.
- Delivered a product alarm regression suite ahead of a tight deadline, increasing team throughput.
- Awarded Best Tester of the Month for identifying and raising high-impact production incidents.

EDUCATION

Bachelor of Engineering, Mechanical Engineering

CERTIFICATIONS

- Selenium WebDriver Masterclass
- Master XPath and CSS Selectors for Selenium WebDriver
- POSTMAN API Testing
- Web Services and REST API Testing with SoapUI
- TypeScript 2021 Edition
- JavaScript Basics for Beginners
